

ILLINOIS PROGRAMS/SERVICES FOR CHILDREN SIGNIFICANTLY IMPACTED BY CHANGES TO **MEDICAID'S STRUCTURE**

Prepared by Legal Council for Health Justice and The Sargent Shriver National Center on Poverty Law and, with input from Illinois child welfare, public health, special education, and early childhood advocates.

Medicaid is integral to state and local health care systems; however, its benefits reach children in a wide range of child and family serving systems, assisting those systems to better meet children's needs.

Nearly 1.47 million Illinois children have health coverage through Medicaid (the "All Kids" program), or around half of all Illinoisans enrolled in Medicaid. Any major funding reductions and changes to Medicaid will have the greatest effect on children. A recent long-term retrospective study found that children who received expanded Medicaid benefits in the 1980s and 1990s made higher combined income, contributed more to the tax system as adults, were more likely to attend college, and had decreased adult mortality rates.¹

Medicaid provides access to care and services to many children with special health care needs.

Early Intervention (EI) provides physical therapy, social work, occupational therapy, speech/language and other services for children birth to 3 with developmental delays (DD) and disabilities, with most services currently billable to Medicaid.

- A federal Medicaid cap would put pressure on EI to reduce expenditures for therapies and increase Illinois' share of EI costs.
- These changes could result in increased spending of state general revenue funds to cover the mandated services, restrictions in program eligibility, provider rate cuts and waitlists for services.

There are now 15.000 children on the waiting list for these Medicaidfunded waivers.

All Kids and privately insured children benefit from waiver programs for children with DD, Autism, and traumatic brain injuries. Of Illinois' 9 HCBS Medicaid funded waiver programs, 6 serve children. 3 waive parental income (protecting families from impoverishment):

- The Children's Support Waiver
- The Children's Residential Waiver
- The Medically Fragile Technology
 - Dependent Waiver (MFTD)

transportation.

does not increase.

Illinois School-Based Health Services Program 2015⁸ In FY16, there were 355,235 students with IEPs receiving special education services in Illinois

Nationally, school districts receive roughly \$4 billion annually from Medicaid for special education services.

Illinois's 2016 Special Education Matching Fund had approximately \$160 million in expenditures.

Mandated School and Child Care Enrollment Child Health Examinations:

Mandated child health examinations include immunizations, developmental and social emotional screenings. lead screenings. and physical examinations.

- Children who do not receive health examinations can be denied enrollment in school or child care. • This could result in the loss of a percentage of General State Aid funding (current state avg. \$3,000 per student).6
- Changes to Medicaid could not only impact a family's ability to access school health examinations, but also deny children access to education and child care and put pressure on local revenue to separately pay for these services.

274.000 Illinois school children Local education agencies received

matching dollars for direct services Local education agencies received

Nationally, 7 out of 10 students receiving mental health services receive those services at school.7

School Based Health Centers are reimbursed by Medicaid for health care services provided within the school setting. Availability of these services increases availability of healthcare services to children. A federal Medicaid cap will likely cause Illinois to experience:

- Fewer health services, particularly in high needs and hard-toserve rural communities
- Job loss of school based care providers such as school nurses, school social workers, and speech language pathologists
- Less support for child mental health

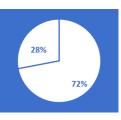

Medicaid Reimburses for Blood Lead Screens, so Children with Elevated Blood Lead Levels are Screened Early & Receive Treatment.

Illinois children 6 months to 6 years old residing in high risk areas are required to be **blood lead screened** for lead poisoning. If they have elevated blood lead levels, they will receive home visits from their local health department. Visits and screenings are Medicaid reimbursable.

If the federal Medicaid program is capped, fewer children will be tested or receive the follow-up services they need.

Illinois Child Blood Lead Levels 2015 9 In 2015, there were 1.1 million Illinois children aged birth to 6. 265.545 children 0-6 had a blood lead test in 2015. 10.322 children tested had a blood lead level ≥5µg/dL.

Of children tested in 2015 with blood lead level ≥5µg/dL, **72** percent benefited from Medicaid programs.⁹

Medicaid Provides Funding for Children and Families Programs: Support for Families, Foster Children; Health Care Coverage for Adopted Children with Special Needs, Family Case Management, and EPSDT Private Care Nursing.

The Illinois Department of Children and Family Services (DCFS) provides a social service safety net for foster children and their families.

- IL receives federal Medicaid to pay for health-related care for foster children, including care, mental health prevention, and treatment services.
- Without support from Medicaid-funded mental health, family stabilization, and health care services, more children could be removed from their homes at great cost to the state and causing preventable harm to families.
- Parents with children under IL DCFS also rely on Medicaid for funding for mental health services, substance abuse treatment, and medical care to regain custody of their children in care. Permanency is not possible without access to treatment, family reunification and adoption help.

Medicaid also provides coverage for children with special needs who are adopted with federally supported subsidies. Because of the medical fragility and behavioral health challenges of many children adopted from state child welfare systems, Medicaid is important so adoptive families have the ability to make a permanent commitment to children.

In 2016, there were **3,033** subsidized guardianship cases in IL, including subsidies for guardianship of children with special needs.¹⁰

If the federal Medicaid program is capped, adoptive children could be without full medical and behavioral health services, potentially destabilizing the tens of thousands of successful IL adoption cases.

infants, and children are seen each year through the program.¹¹

The IL Family Case Program funds **115** agencies

Includes health departments, federally qualified health centers, and community-based organizations. 11

Family Case Management: Optional Medicaid-funded case management is provided to pregnant women, infants, and children with high-risk medical conditions by the IL Department of Human Services (DHS). It provides direct services and links participants to necessary coverage, services and benefits.

Under Medicaid's Early and Periodic Screening, Diagnostic and Treatment (EPSDT) directives, private care nursing is available to all All Kidseligible children who require home nursing services to prevent institutionalization. If the federal Medicaid program is capped, likely access to these services will be restricted. In Illinois, an estimated 1,000 children currently receive private care nursing.

A Federal Medicaid Cap Will End Progress Towards Reimbursing Services, Such as Habilitative Care for Children with Developmental Disabilities, and Services Through the 1115 Waiver, Including Home Visiting Services and Children's Mental Health Initiatives.

Home visiting for expectant and new families is not currently Medicaid reimbursable, but Illinois and the Home Visiting Task Force have been seeking strategies (including the 1115 waiver) for home visiting services to serve drug-impacted newborns and their families. Under federal changes, this becomes less likely.

Expanded therapy coverage for children with developmental disabilities:

- Prior to the Affordable Care Act (ACA), many insurance plans did not cover habilitative care, or rehabilitation to gain functions patients never had, such as speech therapy for children who never learned how to talk
- The ACA required plans to offer coverage of such treatments as essential health benefits in plans sold to individuals and small groups.
- Federal Medicaid caps and allowing states to waive essential health benefits could eliminate habilitative care and other essential services.
